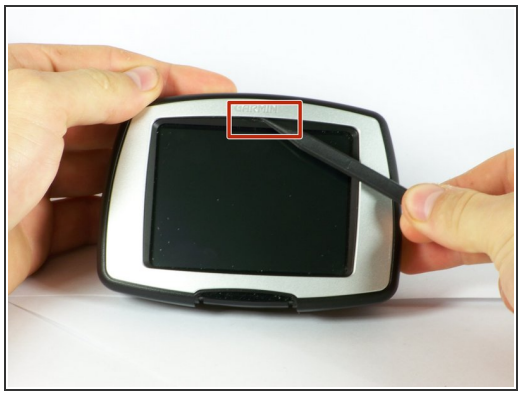
Step 1 — Outer Casing



- At the top of the outer frame, insert the plastic spudger into the groove in the center.
- Lever the frame gently until it pops out of the case.

Step 2

- Use a Phillips #00 screwdriver to remove the four screws around the screen.

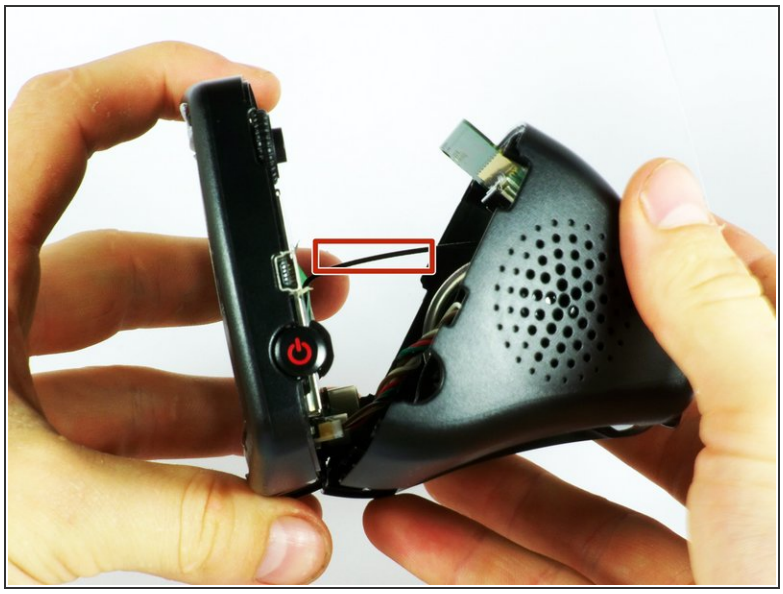
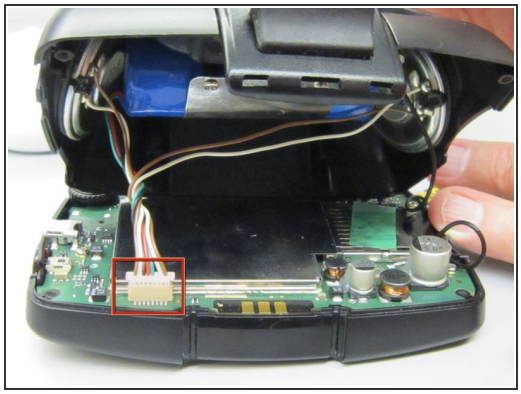
Step 3

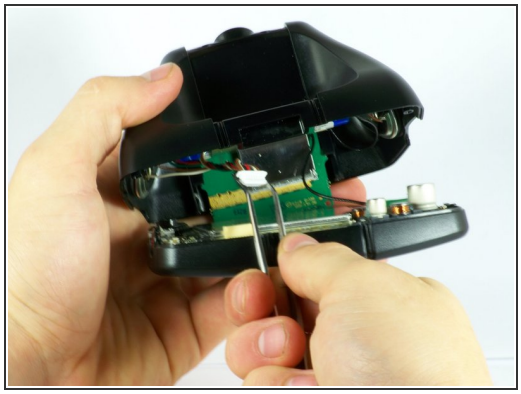


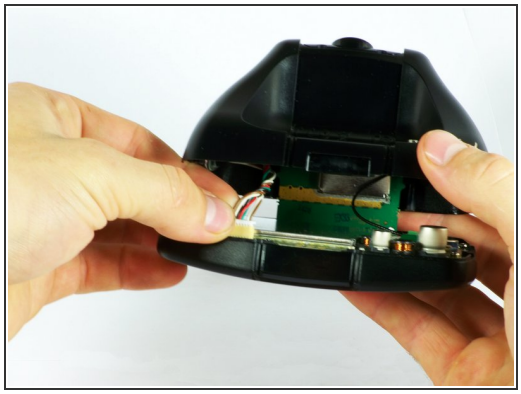
- Gently pull from both ends of the casing to separate the front and back panels.

⚠ Do not force the pieces apart wider than the length of the connecting wires, or you will damage the wiring.

Step 4







- Gently unplug the white cable connector using either your fingers or tweezers.

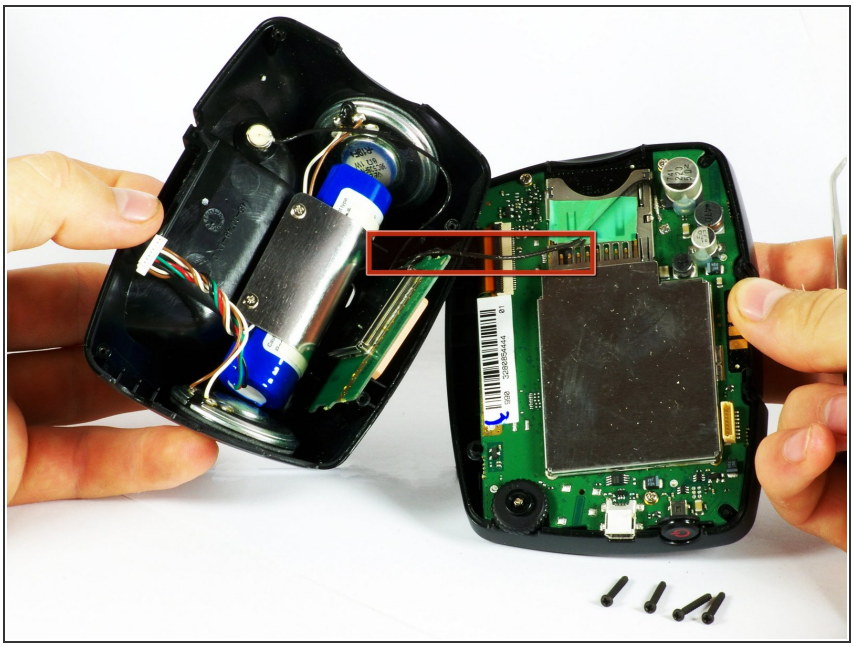
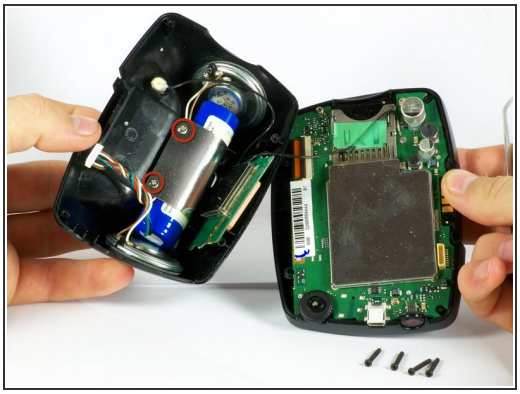
Step 5

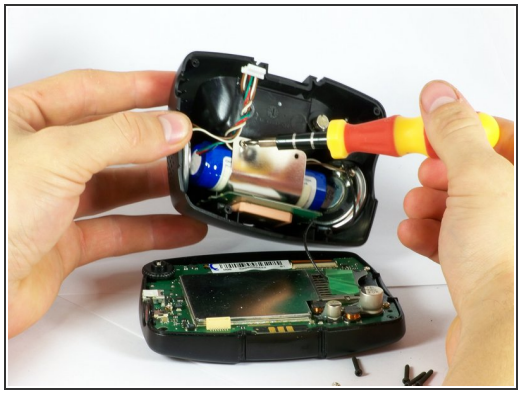


- Carefully expose both halves of the device.

⚠ Be sure not to pull the two halves apart further than the black wire can reach.

Step 6 — Battery





- Use a Phillips #00 screwdriver to remove the two screws from the battery bracket.

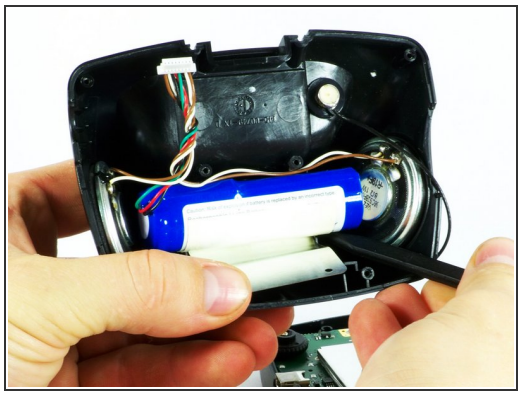
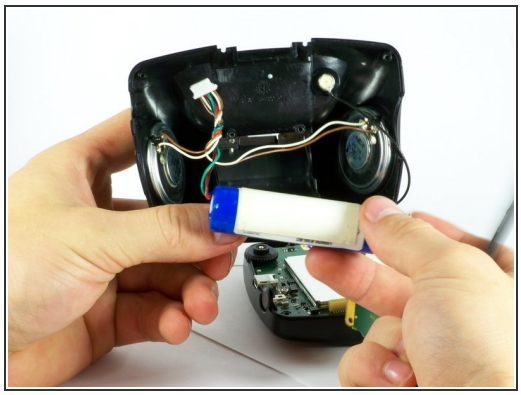
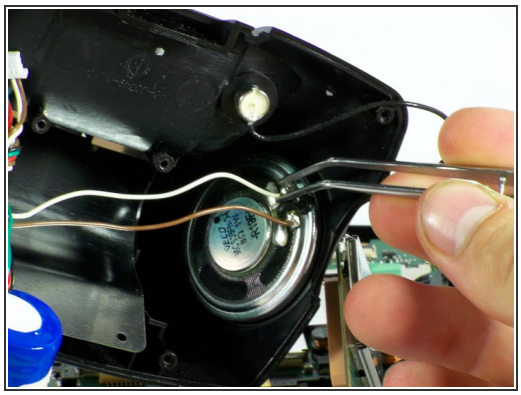
Step 7

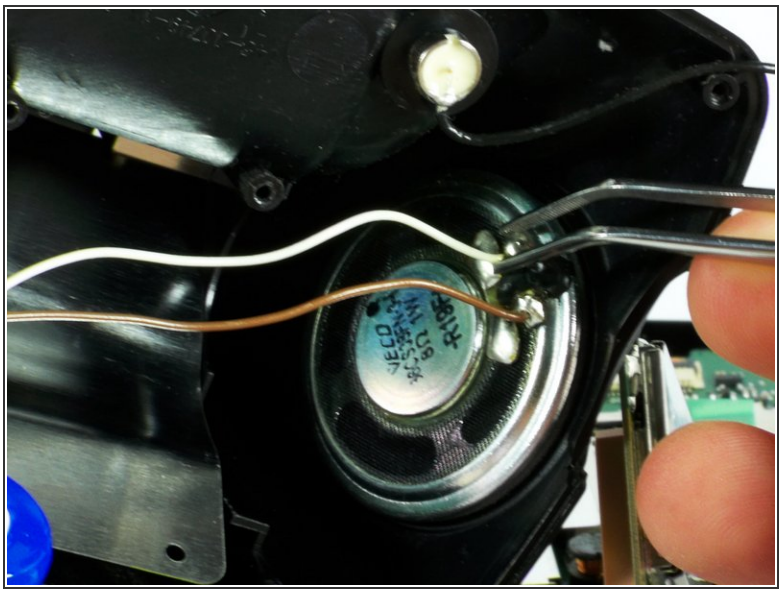






- Carefully peel the metal bracket away from the battery.
- Pull the battery away from the back cover.
- Desolder the wires from the speakers using a [soldering iron](#).

Step 8 — Speakers



- Carefully use the spudger to pry the speakers from the outer casing.
- Once removed, you may use a soldering iron to remove the wires from the speakers.

To reassemble your device, follow these instructions in reverse order.
