INTRODUCTION

If your roller brush is not working even after removing surrounding debris, it is time to replace the roller brush.

TOOLS:

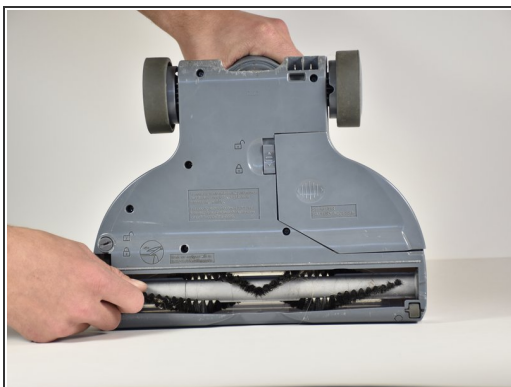

- [Coin](#) (1)
-

Step 1 — Roller Brush

- Remove the black rubber band from the roller brush
- ❗ In most models there will be a plastic cover over the rubber band. You will use the quarter to twist the latch and take off the cover

Step 2

- Use the bristles to pull the end of the brush that was connected to the belt away from the vacuum.

Step 3

- Slide the roller belt off of the roller brush and pull the roller away from the motorized brush.

To reassemble your device, follow these instructions in reverse order.
