

# RedOctane X-Plorer Strum Bar Replacement

How to replace the RedOctane X-Plorer strum bar.

Written By: Jared McMullen

---

## INTRODUCTION

The guitar strings often catch on the plastic case or wear over time. This guide demonstrates how to access the internal components of the strings and diagnose hidden problems.

---

### TOOLS:

- [Phillips #1 Screwdriver](#) (1)
-

## Step 1 — Rear Case

- Remove the strap by pulling it off of the mounts located on the body and neck.

## Step 2

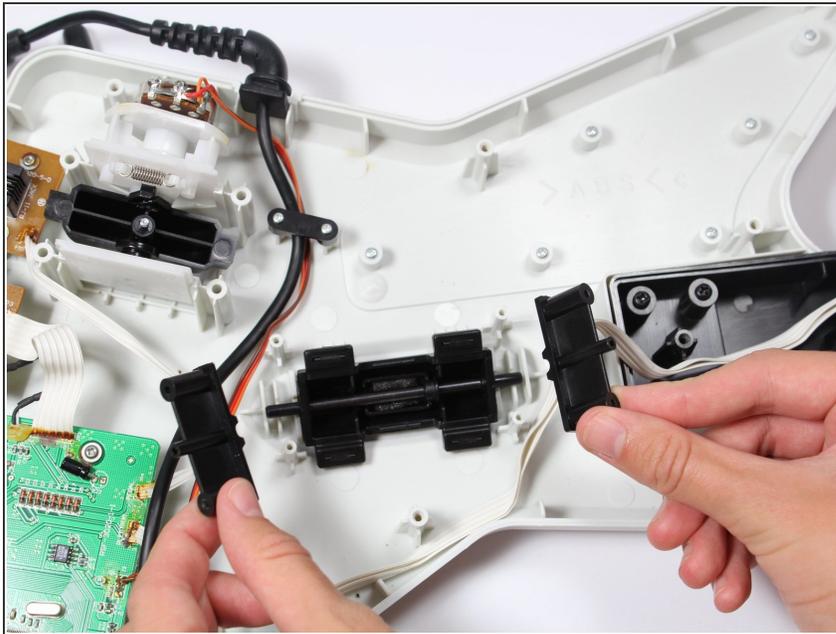

- Remove the nine 12mm Phillips #1 screws around the perimeter of the case with a screwdriver.
- Remove the two 15mm Phillips #1 screws connecting the body panel to the neck panel with a screwdriver.
- ⓘ These screws can also be Torx on some models.
- Pull off the rear case.

### Step 3

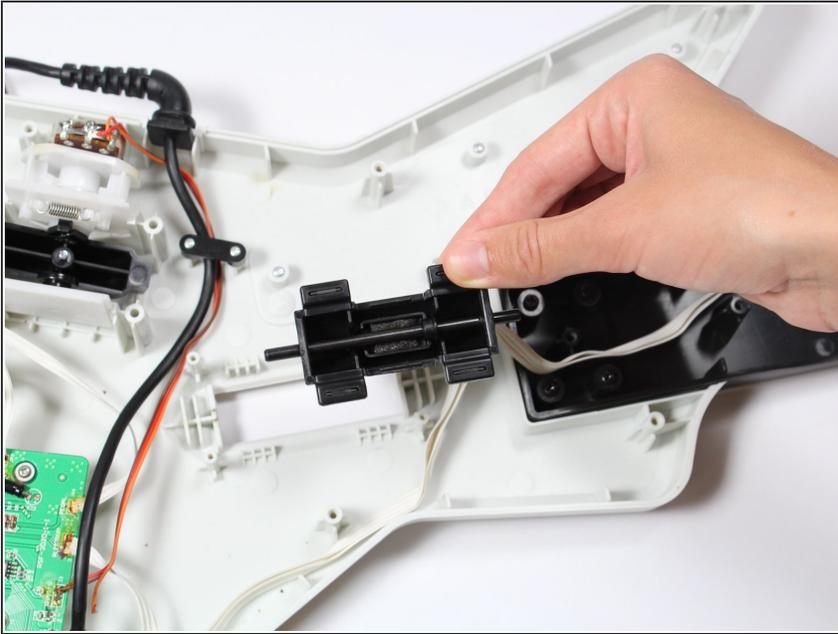

- Remove the five 12mm Phillips #1 screws along the neck with a screwdriver.
- Pull off the top shell of the neck to expose the internal features.

### Step 4 — Strum Bar

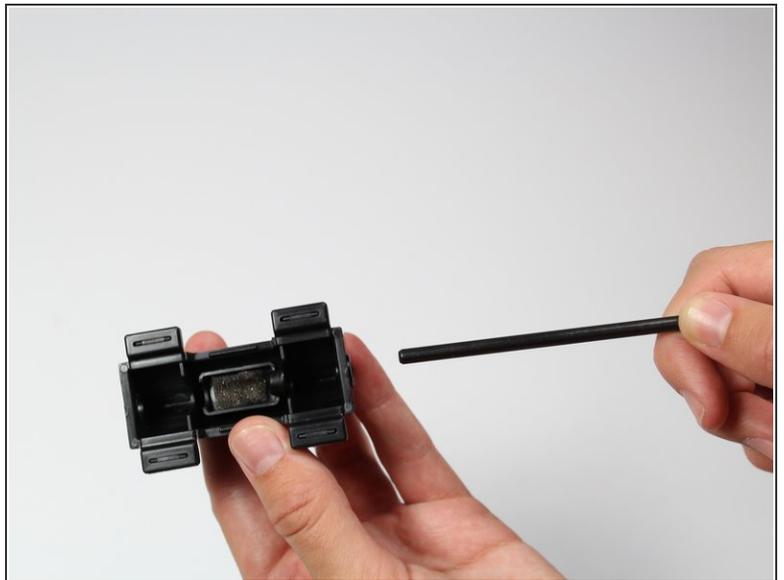

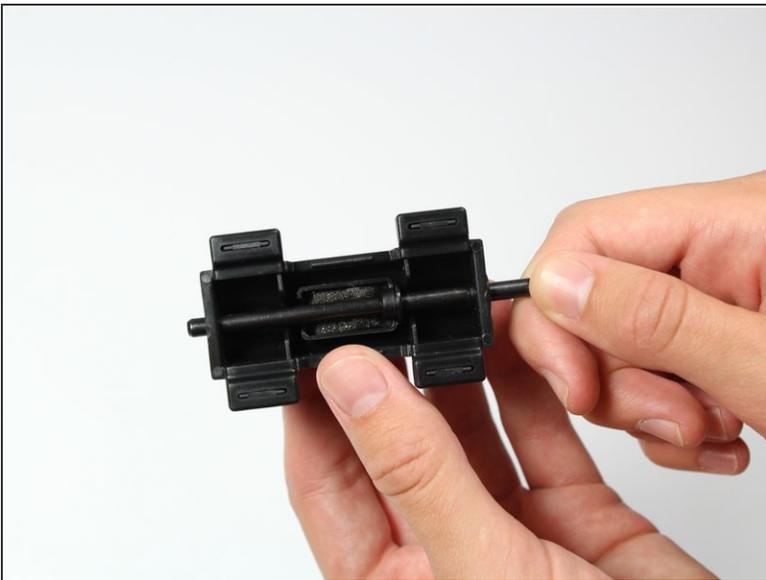

- Using two hands, gently remove the two string rod fixtures.

## Step 5

- Lift up on the strum bar to remove it from the guitar.

## Step 6

- Remove the string rod by gently pulling it out of the strum bar.

To reassemble your device, follow these instructions in reverse order.
