## INTRODUCTION

This guide will help you replace your power module in a HP Color Laser Jet Pro MFP M277dw.

---

### TOOLS:

- [Phillips #2 Screwdriver](#) (1)
  - [Metal Spudger](#) (1)
- (Optional)*
- [iFixit Opening Tools](#) (1)
-

## Step 1 — Power Module

- Open and lower the back panel by pulling it down.
- Remove one Phillips #2 10 mm screw.

## Step 2

- Use the plastic opening tool to remove the right side panel of the printer.
- ⓘ Flipping the printer on its side, with the right side facing up, will make it easier to remove.

### Step 3

- Remove two Phillips #2 12mm screws.
- Remove four different pin connectors that attach to the power module located at the bottom.
- ⓘ Removing the white connector is made easier with assistance of a spudger/flat tip that loosens the clamp.

### Step 4

- Remove two Phillips #2 10mm from the left (front) and right (back) side that attach the power module to the printer.

## Step 5

- Slowly lift the power module from the printer using both hands.

To reassemble your device, follow these instructions in reverse order.
