# Just say NO to Hond

## INTRODUCTION

This is a quick effective way to disable the Honda VCM technology on your van and will also apply to other Honda vehicles. Many Honda owners and other engineers maintain that while VCM is a marginal technology at best for saving gas. It can over time cause engine damage and shortening the life of the engine dramatically. Clearly shortening the life of any vehicle will completely negate any energy savings the technology produces. These are some of the reasons I decided to disable VCM.
