

Dell Latitude E7270 Motherboard Removal

Follow this guide to replace the motherboard of your Dell Latitude E7270.

Written By: Jacob Clement

INTRODUCTION

Use this guide to replace a broken motherboard on your Dell Latitude E7270.

The motherboard is what links all your components together to move information around. They are susceptible to age, shortages, and physical damage. A broken motherboard may leave your computer not working at all.

Before using this guide, check out the <u>troubleshooting page</u> to see if your symptoms match any that represent a bad motherboard.

This replacement requires a #00 Phillips head screwdriver.

NOTE: This guide requires removal of the back panel, battery, and cooling fan. The extra prerequisite guide steps are included in this guide.

TOOLS:

Phillips #00 Screwdriver (1)

Step 1 — Back Panel

- Place the device top down in front of you so that the vents are visible and are furthest from the user.
- Please be sure that the device is powered off and unplugged before removing parts or deconstructing anything.

Step 2

Remove all eight M2.5 X 8MM screws with a Phillips #00 screwdriver.

Lift and remove the panel.

Step 4 — Battery

 Remove the three M2.5 X 5MM screws, located above the battery, with a Phillips #00 screwdriver.

 Disconnect the battery wire by using your fingers to pull diagonally left on the tab.

Step 6

 Remove the battery completely by grabbing an edge and pulling up on the battery.

Step 7 — Cooling Fan

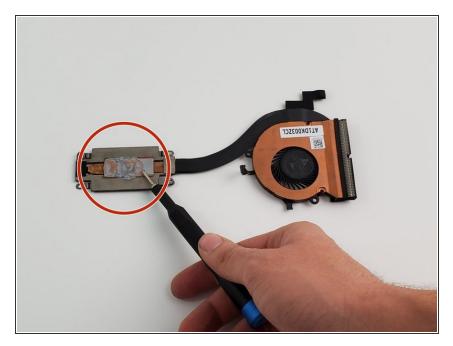

- Remove the 4 pin fan power connector from the motherboard by using your finger and pulling up.
- Remove the four M2.5 X 5MM screws that hold on the rectangular bracket located towards the center of the motherboard using a Phillips #00 screwdriver.
- Remove the three M2.5 X 5MM screws that hold down the circular fan bracket using a Phillips #00 screwdriver.

Step 8

 Lift and remove fan by pulling gently straight up using your fingers

 Before replacing fan, make sure to place a small amount of thermal paste to ensure proper heat dissipation and long term life.

Step 10 — Motherboard Replacement

- Remove the 10 wire connections by using your fingers to separate the connections.
- Remove the thirteen M2.5 X 5MM screws that fasten the motherboard using a Phillips #00 screwdriver.
- Remove the two M2.5 X 8MM external screws that fasten the motherboard from outside using a Phillips #00 screwdriver.

 Lift and remove the motherboard by grabbing the outside edges and pulling straight up.

To reassemble your device, follow these instructions in reverse order.
