## Step 1 — Remove the lower case screws

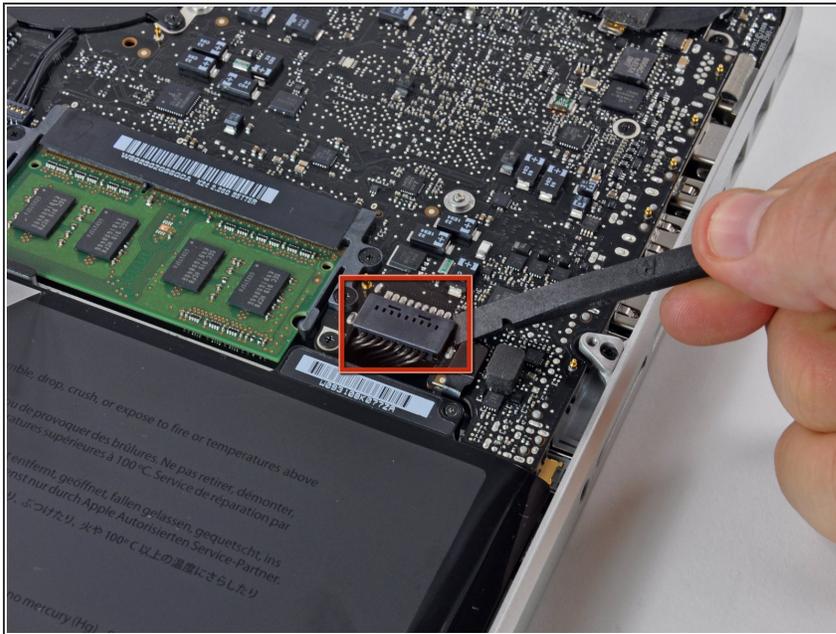

- Remove the following 10 screws securing the lower case to the MacBook Pro 13" Unibody:
  - Seven 3 mm Phillips screws.
  - Three 13.5 mm Phillips screws.

## Step 2 — Lift the lower case away

- Slightly lift the lower case and push it toward the rear of the computer to free the mounting tabs.

## Step 3 — Battery

**⚠** For precautionary purposes, we advise that you disconnect the battery connector from the logic board to avoid any electrical discharge.

- Use the flat end of a spudger to lift the battery connector up out of its socket on the logic board.

## Step 4 — Hard Drive

- Remove two Phillips screws securing the hard drive bracket to the upper case.
- i** These screws are captive to the hard drive bracket.

## Step 5

- Lift the the retaining bracket out of the upper case.

## Step 6

- Lift the hard drive by its pull tab and pull it out of the chassis, minding the cable attaching it to the computer.

## Step 7

- Remove the hard drive cable by pulling its connector straight away from the hard drive.

## Step 8 — Hard Drive

- Remove the two T6 Torx screws from each side of the hard drive (four screws total).
- 📌 You'll need to transfer these screws to your new hard drive if you're changing drives.
- 📄 If you are installing a new hard drive, we have an [OS X install guide](#) to get you up and running.

To reassemble your device, follow these instructions in reverse order.
