

Blackberry 7105t Disassembly

Written By: kelogan

INTRODUCTION

This guide outlines how to do initial disassembly for the device and doubles as prerequisites for other guides.

TOOLS:

- [iFixit Opening Tools](#) (1)
-

Step 1 — Blackberry 7105t Disassembly

- With the back of the device facing you, press down on the button while sliding the battery casing away from the speaker to remove it.

Step 2

- Use a plastic opening tool or fingernails to unclip the two hinges of the speaker covering and remove it.

Step 3

- Remove the battery by pushing against it from the right and then pulling towards you.

Step 4

- Remove the four screws indicated in the picture with a #T6 Torx Bit screwdriver and set them aside.

Step 5

- Use a plastic opening tool or your fingernails to remove the plastic backing.
- Start with the seam indicated in the picture and slide the plastic opening tool until the case is separated.

Step 6

- Unscrew the four screws indicated in the picture with #T6 Torx Bit screwdriver.
- Place the four screws released from the phone in a plastic bag.

Step 7

- The black battery casing and logic board can now be separated for the following steps.

To reassemble your device, follow these instructions in reverse order.
