# INTRODUCTION

This guide gives instructions on how to replace the screen on an iPhone 5c.

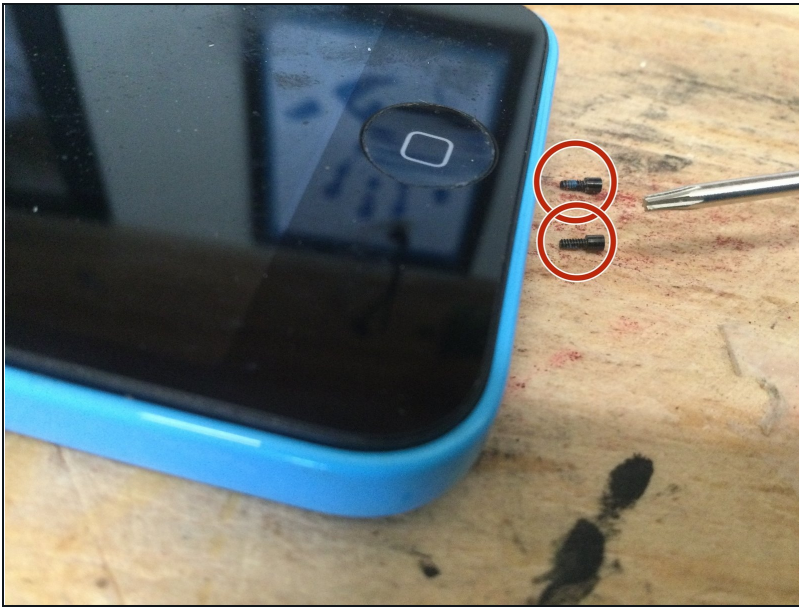

## TOOLS:

64 Bit Driver Kit (1)  
Heavy-Duty Suction Cups (Pair) (1)  
iFixit Opening Picks (Set of 6) (1)

## PARTS:

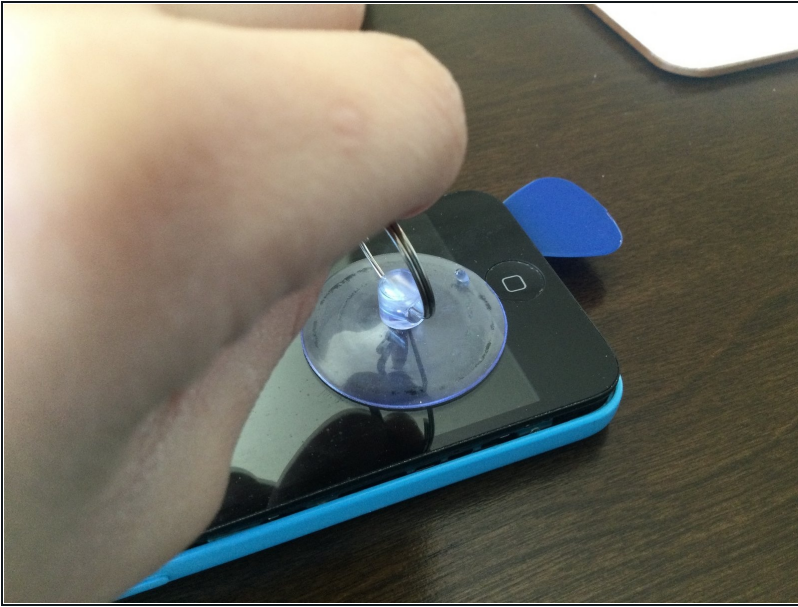

iPhone 5c Screen (1)

### Step 1 — Taking out bottom screws

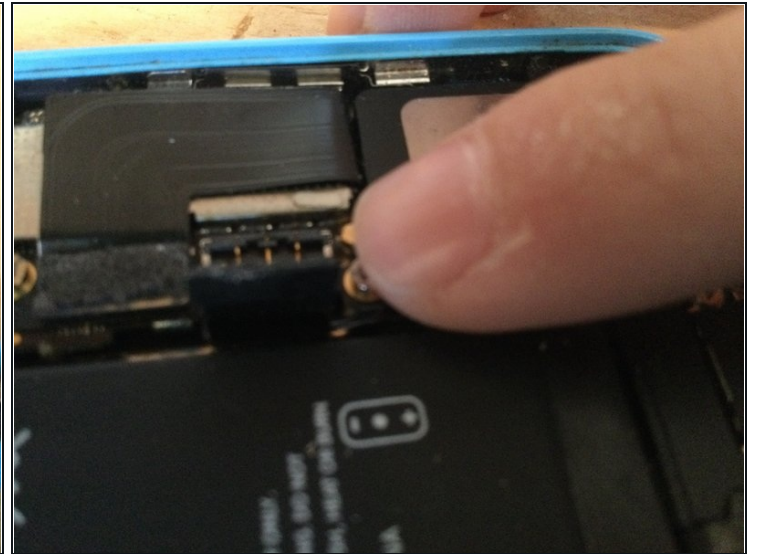

- Take out the pentalobe screws from the bottom of the iPhone next to the speakers.

## Step 2 — Pulling up screen

- Get suction cup and pull up.
- ① Note: Use a guitar pick and pry up to lift screen easily.

## Step 3 — Unplugging battery

- Unplug battery take out Phillips head screws on the cover and unplug the battery.

## Step 4 — Removing shield and cables

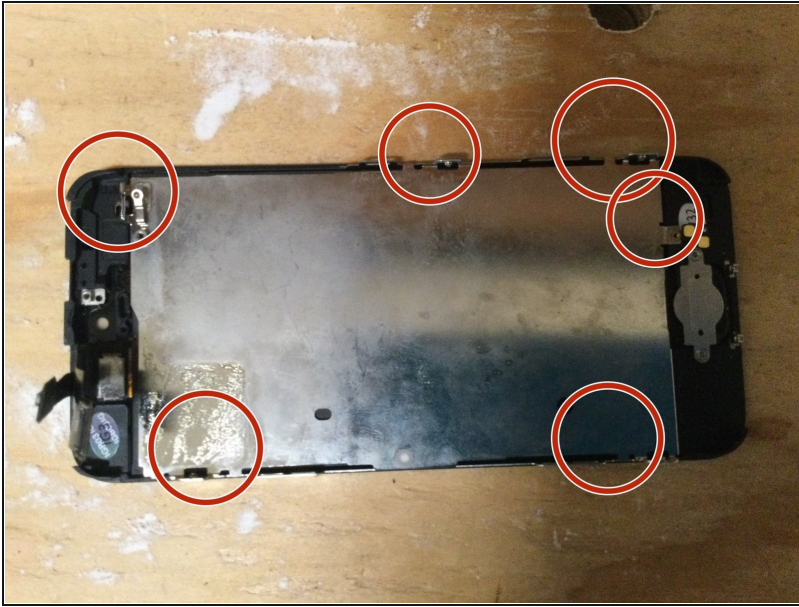

- Take off screen cables by removing the shield with four Phillips head screws

## Step 5 — Remove front facing camera and microphone

- Remove camera and micro bracket with its two Phillips head screws.
- ⓘ Note: small sticker needs to be pulled up from front facing camera.

## Step 6 — Removing screen back plate

- Remove back plate with six Phillips head screws.

## Step 7 — Removing home button

- Remove home button bracket and take out the home button. (You may need to use a guitar pick to loosen home button adhesive).

To reassemble your device, follow these instructions in reverse order.
