---

## INTRODUCTION

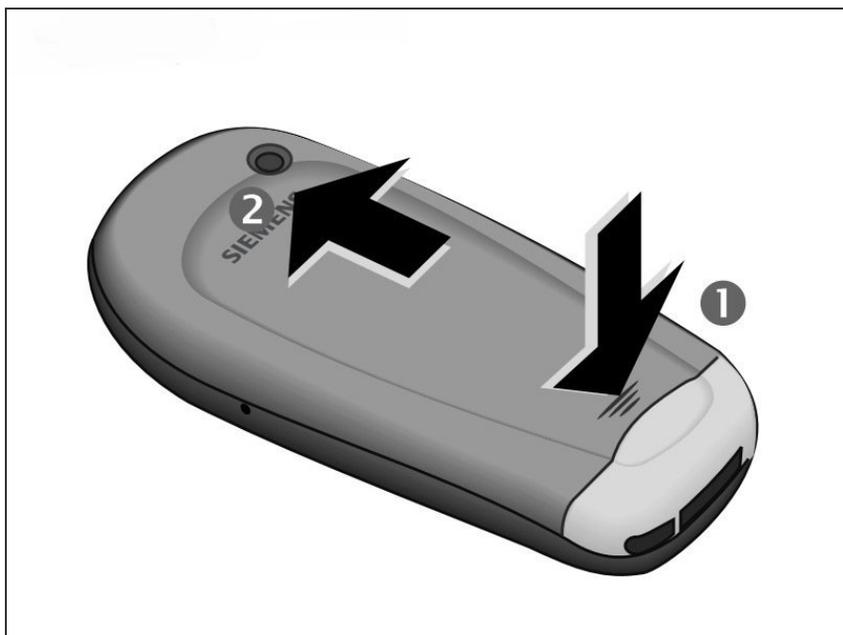

In order to reach the internal components of the Siemens A56, the back plastic cover must be removed.

---

### TOOLS:

- [T5 Torx Screwdriver](#) (1)
  - [iFixit Opening Tools](#) (1)
-

## Step 1 — Battery

- Press down on the grooved area firmly in the direction of arrow #1.
- While maintaining the downwards pressure, push the back cover in the direction of arrow #2 until the back cover slides off.

## Step 2

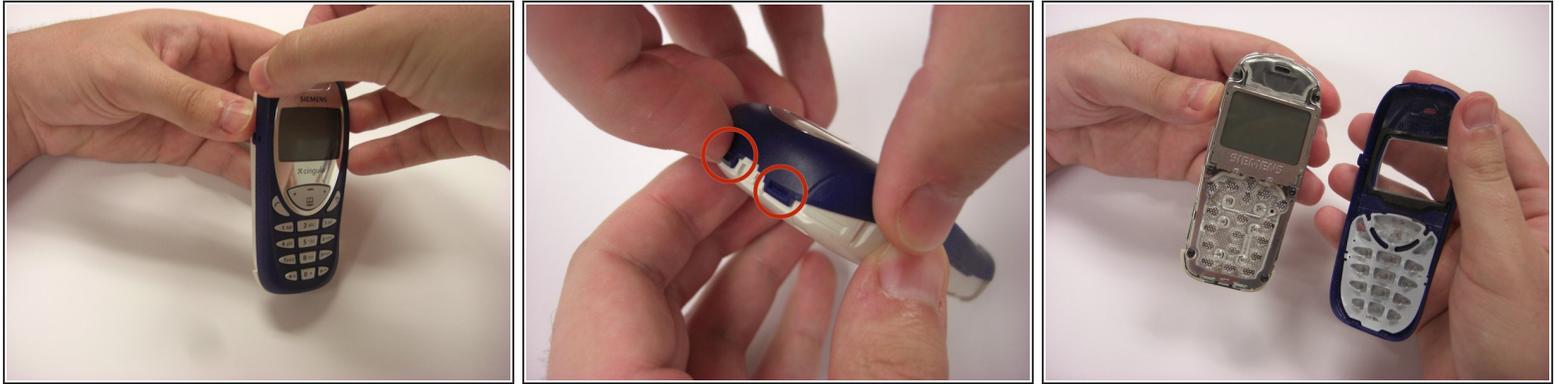

- !** Turn off the phone before removing the battery to avoid damage.
- Press the latch on the battery in the direction of arrow #3.
- Lift battery at the cutout on the side of the phone, then tilt upwards and remove.

**i** It may be necessary to use the tip of a fingernail or a plastic lifting tool to remove the battery.

### Step 3 — Front Plate

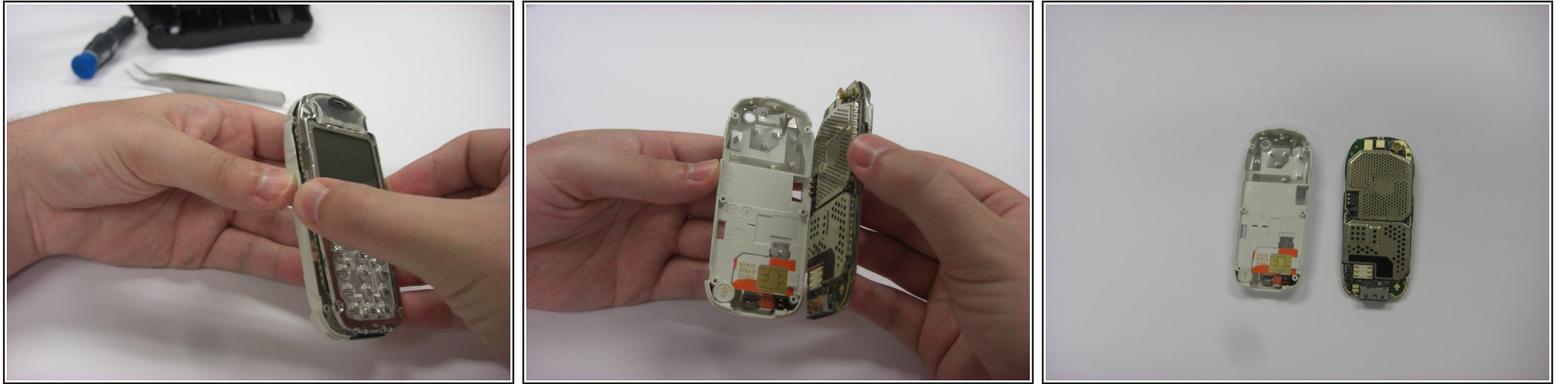

- Firmly grasp the white casing of the phone with one hand and the blue cover with the other hand as seen in the first picture.
- Pull up on the two plastic clips at the top of the phone.
- While the clips are pulled up, pull the blue cover away from the white casing to remove it.

### Step 4 — Back Plastic Cover

- Along the side of the metal frame of the phone, locate the six screws.
  - Using a T5 screwdriver bit, unscrew the six 1/4 inch screws and store them in a safe place.
- ⚠** The screws are very small and can strip easily, so proper care is required when removing and storing the screws.

## Step 5

- To remove the back plastic cover, grasp the device with both hands as seen in the first picture.
  - Gently remove the motherboard from the back plastic cover.
- ⚠ The motherboard is fragile, so proper care is necessary when handling and storing in order to prevent damage.

To reassemble your device, follow these instructions in reverse order.
