Step 1 — Battery

- Ensure the device is powered down and unplugged.

- Turn the device upside down with the battery compartment facing you.

- Slide the black slider to the right and lift the battery out of its compartment.

Step 2 — Back Plate

- Locate and remove the six Phillips PM2.5×7.0 screws around the perimeter of the back plate.

 - ⓘ These screws do not completely detach from the device when unscrewed.

Step 3

- Use the plastic opening tool to lift up the back plate and set it aside.

Step 4 — RAM

- Rotate the device 90 degrees to the left.

This document was generated on 2020-11-16 11:09:27 AM (MST).
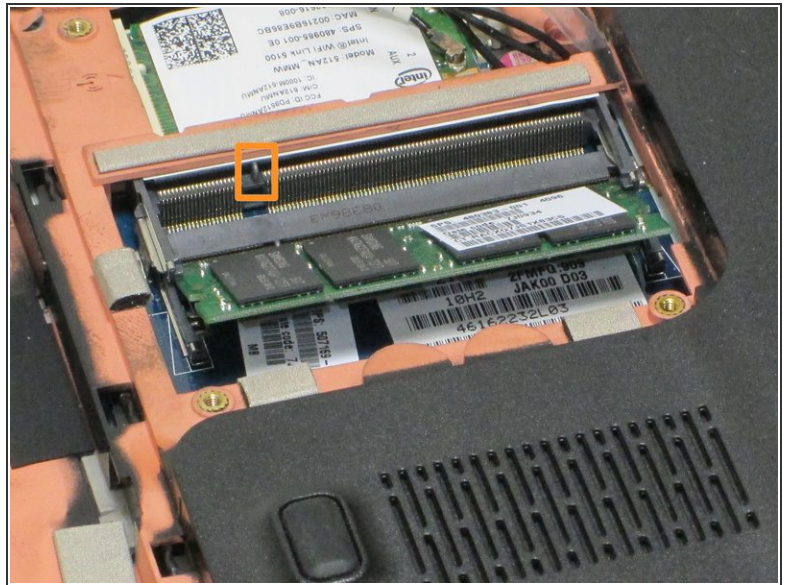

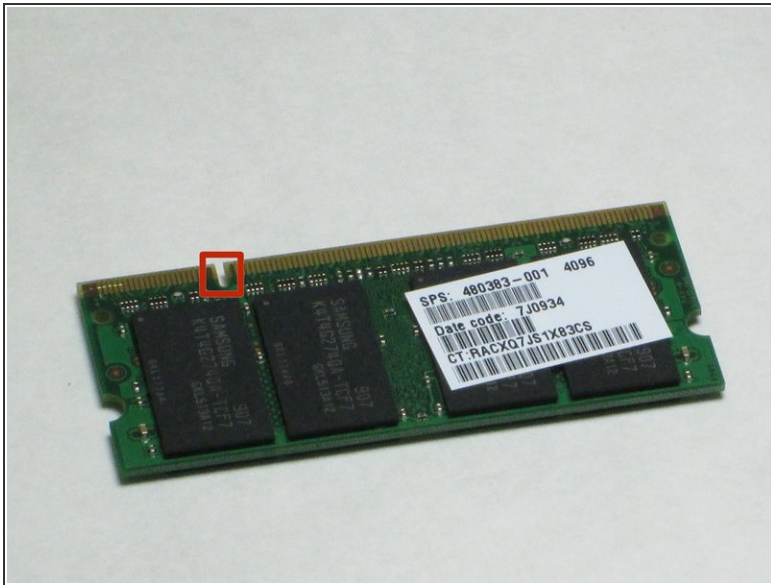

Step 5

- Locate the grey clips on the side of the RAM and pull the grey clips away from the RAM using the plastic opening tool.

Step 6

- Unplug the RAM.

- Repeat step 6 to remove the second piece of RAM.

Step 7

(i) These steps are important in the replacement of the RAM, they will assist in ensuring the device is not damaged.

● Align the notch in the new RAM with the peg on the plug

● Ensure the RAM is fully inserted into the plug at a 45 degree angle such that the notch of the RAM lines up with the peg on the plug
