Step 1 — Motherboard Removal

- To open up the casing, you will need to unscrew the four Phillips #0 15mm screws which are accessible from the back.
Step 2

- Gently separate the two halves of the casing.

Step 3

- Disconnect the battery from the motherboard by lifting up on the white plastic tab on the top of the connection.

- Gently pull the cord out by the white plastic adapter. Do not pull from the red and black cord.

Step 4

- Unscrew the Phillips four #0 15mm screws to free the motherboard from the casing.

Step 5

- Slowly pull the motherboard out of the casing. Make sure the loose battery wire doesn't get snagged.
