Canon EOS Rebel XS Grip Replacement

Use this guide to replace the grip of the camera.

Written By: Daniel Bussone

INTRODUCTION

Use this guide to replace the grip of the camera.

🔧 TOOLS:

- Phillips #00 Screwdriver (1)
- Spudger (1)

Step 1 — Latch Side Cover

- Remove the two 3mm (1/8") black screws from the side cover using a #00 Phillips screwdriver.

Step 2

- On the bottom, remove the 6mm (13/64") screw with the #00 Phillips Screwdriver.

- Pry up the panel; starting from the front/bottom corner, as indicated.
  - There's a concealed lip, under the opposite edge.

Step 3 — Disassembling Canon EOS Rebel XS Front Cover

- Remove three medium length screws from the bottom of the camera

Step 4

- Remove the two medium length screws on the front panel of the camera above the lens mount.

- Once you done, you may use the Spudger to panel from non-grip side.

- (i) If you start on the grip side, it will be more challenging to loosen the panel.

Step 5 — Grip

- Remove the two 4.5mm (.18in) long black screws from the camera grip using a #00 Phillips screwdriver.
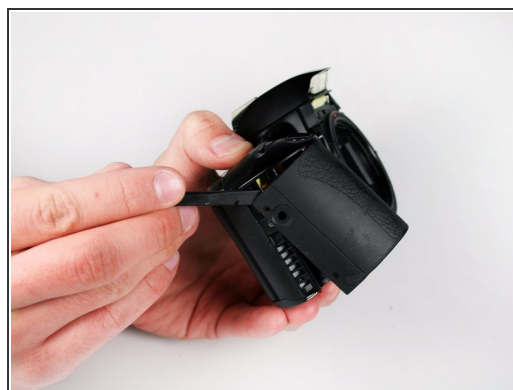

Step 6

- Use your fingertip to pry off the external shutter port cover.

Step 7

- Remove the two 5mm (.20in) long silver screws securing the grip to the camera using a #00 Phillips screwdriver.

Step 8

- Use the spudger tool to carefully pry the grip from the rest of the camera.

Step 9

- Once the grip is loose, use your fingers to remove it from the camera.

To reassemble your device, follow these instructions in reverse order.
