INTRODUCTION

Without a working battery, a laptop becomes anchored to a wall outlet. That's not very mobile! In this guide, you will learn how to remove and replace the battery.

Step 1 — Battery

- Shutdown the computer.

- Remove all external devices.

- Unplug the power, and any other cords, from the laptop.

- Turn the laptop upside down, with the front towards you.

Step 2
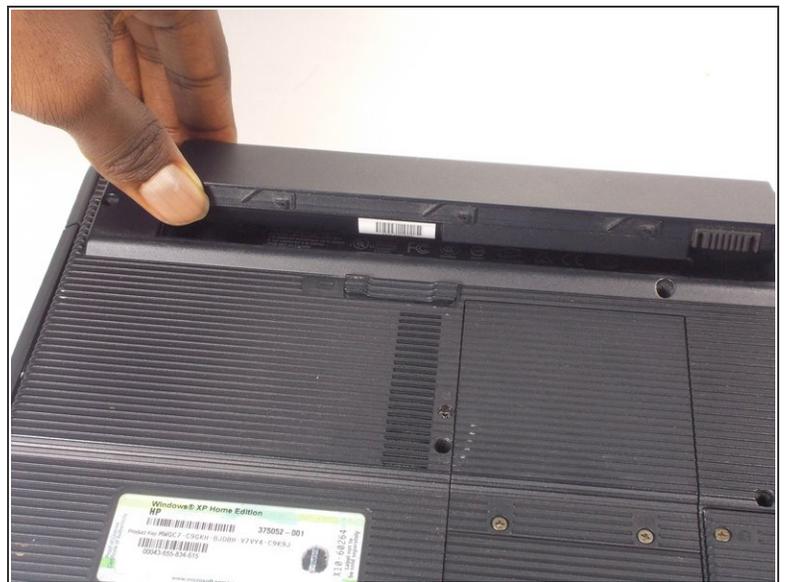

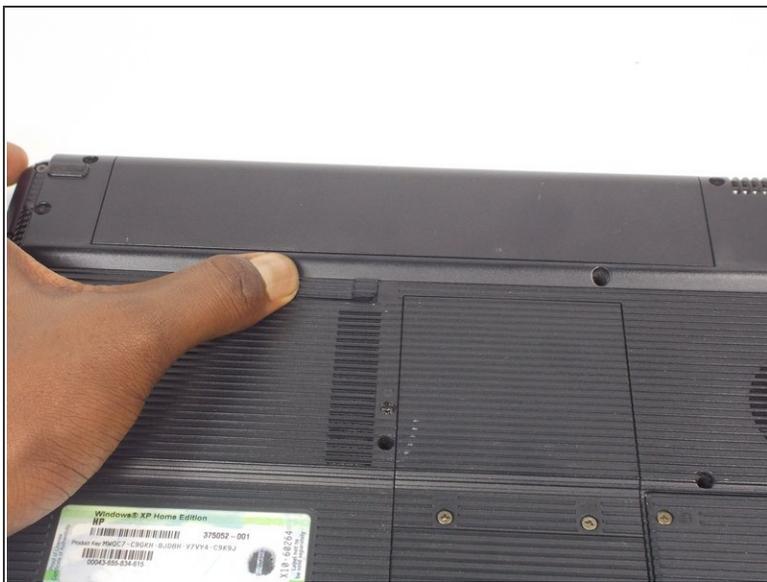

- Slide the battery release latch to the left until the battery pops up.

- Lift the front edge of the battery pack and swing it back to remove it.

- ⊡ When reassembling, first align the back of the battery with the chassis, then press the front downwards until it latches.
