## Step 1 — I/O Board Cable

- (i) If your I/O Board cable's connectors have <u>notches in the padding</u>, you will need to release a locking lever underneath the notch in order to remove the cable. If this is the case, don't pry up on the connector until the levers are unlatched.
- Using the flat end of a spudger, pry the I/O Board connector straight up out of its socket on the logic board.

During reassembly, connect this end first, as it does not flex.

- In a similar fashion, remove the I/O Board cable connector from its socket on the I/O Board.
- Remove the I/O Board cable from the MacBook Pro.

To reassemble your device, follow these instructions in reverse order.
